The college puts a high premium on e-learning. It knows it very well that the coming age is an age of technology. The college is well aware of the fact the future of the nation depends on technology. Therefore, it keeps its focus on technology and tries hard to impart education to its students about the same. In the line of this vision, the IT Dept. of the college (Prof. Kartar Singh & Prof. Karamjit Singh) started a valuable '120 HOURS BASIC COMPUTER COURSE'. It was an online course that was aimed at imparting training to the students about various computer related operations like: word, power point, excel, online transactions , internet banking etc. The course proved to be a hit among the students. After the successful completion of the course, certificates were also given to the beneficiaries. The said course jells well with NEP 2020 that accords importance to e-learning. Of late, imparting e- education has become an article of faith with the college. The said course was an extension of the same principle. The college further plans to commence more such courses/programme in future.
